

# Comparison of two interquartile ranges and identify any outliers in either set

The five number summary for the day and night classes is

|       | Min  | Q1 | Median | Q3   | Max |
|-------|------|----|--------|------|-----|
| Day   | 32   | 56 | 74.5   | 82.5 | 99  |
| Night | 25.5 | 78 | 81     | 89   | 98  |

Finding the IQR for Day data

|     |    |    |      |      |    |
|-----|----|----|------|------|----|
| Day | 32 | 56 | 74.5 | 82.5 | 99 |
|-----|----|----|------|------|----|

$$\text{IQR} = Q3 - Q1$$

$$Q1 = K/100 * (n+1) \Rightarrow 25/100 * (5+1) \Rightarrow 25/100 * 6 \Rightarrow 1.5$$

$$Q1 \Rightarrow 32 + 56 / 2 \Rightarrow 44$$

$$Q3 = K/100 * (n+1) \Rightarrow 75/100 * (5+1) \Rightarrow 4.5$$

$$Q3 \Rightarrow 82.5 + 99 / 2 \Rightarrow 90.5$$

$$\text{IQR} = Q3 - Q1 \Rightarrow 90.5 - 44 \Rightarrow 46.5$$

$$\text{Lowest Outlier} \Rightarrow Q1 - 1.5 * \text{IQR} \Rightarrow 44 - (1.5 * 46.5) \Rightarrow -25.75 \rightarrow \text{outlier range}$$

Hence Outlier range for **Lowest Fencing** value cannot go beyond -25.75 and if it goes we can replace the value with -25.75

Highest Outlier  $\Rightarrow Q3 + (1.5 * 46.5) \Rightarrow 90.5 + (1.5 * 46.5) \Rightarrow 160.5$  outlier range

Hence Outlier range for Highest Fencing value cannot go beyond 160.5 and if it goes, we can replace the value with 160.5

Now let's find the do we have outlier in the Day data first

|     |    |    |      |      |    |
|-----|----|----|------|------|----|
| Day | 32 | 56 | 74.5 | 82.5 | 99 |
|-----|----|----|------|------|----|

As per the Lowest and highest fencing calculation for Day data we don't find outliers for Left Fencing nor Highest Fencing.

Now Lets calculate the IQR and its Lowest and highest fencing for the Night Data

|       |      |    |    |    |    |
|-------|------|----|----|----|----|
| Night | 25.5 | 78 | 81 | 89 | 98 |
|-------|------|----|----|----|----|

$IQR = Q3 - Q1$

$Q1 = K/100 * (n+1) \Rightarrow 25/100 * (5+1) \Rightarrow 25/100 * 6 \Rightarrow 1.5$

$Q1 \Rightarrow 25.5 + 78 / 2 \Rightarrow 51.7$

$Q3 = K/100 * (n+1) \Rightarrow 75/100 * (5+1) \Rightarrow 4.5$

$Q3 \Rightarrow 89 + 98 / 2 \Rightarrow 93.5$

$IQR = Q3 - Q1 \Rightarrow 93.5 - 51.7 \Rightarrow 41.8$

Lowest Outlier  $\Rightarrow Q1 - 1.5 * IQR \Rightarrow 51.7 - (1.5 * 41.8) \Rightarrow -11 \rightarrow$  outlier range

Hence Outlier range for **Lowest Fencing** value cannot go beyond -11 and if it goes we can **replace the value with -11**

**Highest Outlier** =>  $Q3 + (1.5 * 46.5) = 93.5 + (1.5 * 41.8) = 156.2$  **outlier range**

Hence Outlier range for Highest Fencing value cannot go beyond **156.2** and if it goes, we can **replace the value with 156.2**
